

ONYEIBOR SAMUEL

Backend Software Engineer (Python / Django / FastAPI)

+234 907 453 8255 | samuelonyeibor21@gmail.com | Remote (Nigeria-based) | github.com/Sam-3l | linkedin.com/in/samuel-onyeibor-b80866283 | sam-3l.github.io

SUMMARY

Backend-focused software engineer with a track record of designing, building, and operating production systems end to end in Python, using Django, Django REST Framework, and FastAPI. Experience spans relational schema design with PostgreSQL, MySQL, and Django ORM, integrating third-party APIs and payment systems, building real-time features with WebSockets and Django Channels, and managing deployments on AWS, VPS, and cloud platforms. Also comfortable in Node.js, Express, and TypeScript for full-stack work. Known for taking full ownership of a codebase, diagnosing deep production issues, and delivering reliably under tight deadlines.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript

Backend & Frameworks: Django, Django REST Framework, FastAPI, Node.js, Express

Databases & ORMs: PostgreSQL, MySQL, Django ORM, Redis, Firebase / Firestore, Prisma, Drizzle ORM

Real-Time & Messaging: Django Channels, WebSockets, Socket.io

Auth & Payments: JWT, Passport.js, Firebase Auth, Stripe

DevOps & Infrastructure: Docker, AWS (EC2 / S3), Nginx, Gunicorn, CI/CD, Render, Firebase Hosting & Cloud Functions

Other: REST API design, React, Next.js, Vite, Git / GitHub

PROFESSIONAL EXPERIENCE

TrueTrader, Backend Developer, DevOps & QA (truetrader.pro)

Oct 2025 – Apr 2026

FastAPI, Python, PostgreSQL, Docker, AWS

- Took over backend, DevOps, and QA on an in-progress AI powered trading journal and analytics platform, continuing development on a FastAPI/PostgreSQL/Docker stack hosted on AWS from where a previous engineer had left off.
- Researched and implemented a WebSocket based integration with cTrader's Protobuf based Open API to retrieve live trades, journals, and account data, including a multi step authentication flow and symbol ID to name resolution, replacing a non-functional REST based approach.
- Designed and built a complete broker file upload and parsing system supporting MT4, MT5, and other trade history formats, normalizing differing column structures and number formats so uploaded trades integrate seamlessly with existing analytics, AI insights, and chat features.
- Resolved broker connection routing bugs, duplicate connection handling, and cache invalidation issues, and implemented cascading deletes for foreign key dependent records.
- Performed end to end DevSecOps on the production AWS server, including service configuration, memory and performance tuning, and security hardening across backend, AI ingestion, and Docker services, alongside QA testing and occasional emergency frontend fixes.

Bitexly, Full-Stack Developer & DevOps (bitexly.com)

Oct 2025 – Feb 2026

Django REST Framework, React/Vite, PostgreSQL

- Designed, built, and hosted a full-stack cryptocurrency exchange platform from scratch, integrating 5 third party exchange and on-ramp providers (MoonPay, SimpleSwap, LetsExchange, Exolix, FinchPay) into a single unified backend.
- Implemented JWT authentication, Stripe payments, Cloudinary media handling, and Redis backed real-time features via Django Channels.
- Set up and managed deployment on a VPS with Nginx and Gunicorn.

IkonetU, Full-Stack Developer (ikonetu.com)

Dec 2025 – Mar 2026

Django REST Framework, TypeScript/React, Express, Drizzle ORM, PostgreSQL

- Designed and built a full-stack platform connecting startup founders with investors end to end, across three codebases: a Django REST Framework backend, a TypeScript/React admin dashboard, and a TypeScript/Express plus PostgreSQL (Drizzle ORM) web application.
- Implemented real-time messaging and notifications using WebSockets (Django Channels and Node ws).
- Built a media upload and processing pipeline (FFmpeg) for pitch video content.
- Implemented JWT/Passport based authentication with role based access for founders, investors, and admins.
- Deployed and managed the entire stack on Render.

Aevo Technologies, Backend Developer & DevOps (Agency) (aevotech.ng) *Oct 2025 – Present*

- Work as a backend developer and DevOps engineer for a technology agency, contributing to client projects involving Python/FastAPI backends, AWS infrastructure, and Docker based deployments.
- Handle server configuration, performance tuning, and security hardening for production services as part of ongoing agency engagements.

U-Recover, Lead Backend Developer *Apr 2024 – Dec 2024*

- Designed and implemented backend APIs for a mental health and recovery platform using Django and Django REST Framework, with PostgreSQL for data storage.
- Handled authentication, query optimization, and frontend integration, and authored API documentation for the team.

De Collaborators, Backend Developer *Aug 2023 – Nov 2023*

- Built REST APIs with Django and documented them with Swagger, and implemented Redis based caching to improve response times on frequently accessed endpoints.

Sunjokia Everafter, Backend Developer & DevOps (sunjokiaeverafter.com) *Mar 2026 – May 2026*

TypeScript, Node.js, React, Firebase

- Designed, built, and deployed the entire backend for a live matchmaking platform from the ground up, covering profiles, discovery and matching, messaging, notifications, and an admin panel; the platform now serves 1,000+ active users across the US, UK, and other countries.
- Diagnosed and resolved a critical email deliverability issue that was sending all transactional emails (verification, password reset, notifications) to spam, restoring reliable delivery platform-wide.
- Fixed a Firebase Storage 403 error caused by ID token expiry by enforcing token refresh before uploads, resolving broken profile image uploads for the entire user base.
- Built GPS based location capture with reverse geocoding (via BigDataCloud) and discovery feed segmentation logic to power region based matching.
- Implemented a scheduled job that automatically removes incomplete sign-ups after 14 days to keep the user database clean.
- Rewrote a core location permission component as a state machine to fix Safari/iOS edge cases, and shipped multiple admin panel improvements including new filters, pagination fixes, and data corrections.

Matchki, Full-Stack Developer *Oct 2025*

- Built a TypeScript monorepo (Next.js, Express, Prisma/PostgreSQL) for an international client, featuring real-time chat via Socket.io, JWT authentication, and Stripe payments; deployed on Render.

Stones Technologies, Software Developer (Agency) (stoneshq.com) *Sep 2025 – Present*

- Work as a backend and full-stack developer for a software development agency, building and shipping features across a portfolio of client projects.
- Became the team's primary developer for new client work based on code quality, reliability, and delivery speed.

EDUCATION

B.Sc. Electrical & Electronics Engineering, Obafemi Awolowo University (OAU), Ile-Ife, Nigeria *(In Progress, 300 Level)*
